

A

chr1q32.2 region: amyloid-PET GWAS signal (Ali 2023 multi-ethnic)

B

Per-gene SuSiE credible-set members (GTEx_V8 Brain_Cortex)

Ali 2023 amyloid-PET multi-ethnic GWAS in the chr1q32.2 region (top panel; $n=3321$ SNPs in ± 350 kb window).

Per-gene SuSiE credible-set member SNPs from GTEx_V8 Brain_Cortex (bottom panel; CR1 in red, CD46 in blue; CR1L has no credible set in this tissue).

Point size in panel B is proportional to SuSiE posterior inclusion probability (PIP). Black-ringed points are the credible-set leads (highest PIP per credible set).

Dashed vertical lines mark the amyloid GWAS lead rs6656401 (black), CR1 credible-set lead rs679515 (red), and CD46 credible-set lead rs2724384 (blue).

The CR1 credible set co-localises spatially with the amyloid signal envelope; the CD46 credible set sits 238 kb distant from the amyloid lead with no amyloid signal.
